

WALKTHROUGH · JUNE 2026

Menu Hub

The single source of truth for every menu across every event. Edit content here, sync it to Figma, export it to print. This guide covers everything you'll touch day-to-day.

Audience

Internal & external editors

01 The big picture

Menu Hub is the **single source of truth** for every menu across every event. You edit content here; the Figma menu templates pull from here; the printed PDF/SVG exports pull from here. No more passing CSVs around or hunting for the latest version of a Figma file.

The hierarchy goes:

Brand → Series → Event → Menu → Items

For CRSSD, that looks like:

CRSSD › **CRSSD Festival** › **CRSSD Spring 2026** › **Craft Cocktails** › Waterfront Mule, Bay Breeze Spritz, ...

You'll spend most of your time at the **Menu** and **Item** levels.

02 Logging in

1. Go to fcmenus.netlify.app
2. Sign in with your email + password
3. First time logging in: use the magic-link or password-reset flow from the sign-in page
4. If you don't have access yet, ask Sean — accounts are added one at a time

After logging in you land on the **Dashboard**.

03 Dashboard

Your home screen.

PANEL	WHAT IT IS
Recent Events	Events you've touched lately — fastest way back into work
Brands	Every brand you have access to. Click one to drill in
Favorites	Star any event/menu and it appears here

The left sidebar always has **Dashboard, Favorites, Sponsors, Help, Admin**. The brands you have access to also appear in the sidebar under "BRANDS".

04 Navigating to a menu

The path is always the same:

1. Click a brand in the sidebar (e.g. **CRSSD**)
2. Click a series (e.g. **CRSSD Festival**)
3. Click an event (e.g. **CRSSD Spring 2026**)
4. Click a menu (e.g. **Craft Cocktails**)

The breadcrumb at the top is clickable — use it to jump back up. The < back arrow next to the page title also works.

05 Event page tabs

When you open an event, you see these tabs:

TAB	WHAT IT SHOWS
Menus	Every menu for this event as cards. Status chip (Build / Proof / Approved), sync chip (Synced / Not synced), and red number badge for pending edits. Click a card to open it.
Preview all	Visual previews of every menu in one screen — handy for review meetings.
Sponsors	All sponsors enabled for this event. Toggle which ones are active. Populates the sponsor library that menus draw from.
Approvals	Sign-off panel. Track who needs to approve event-level work and where each person stands.

06 Menu page tabs

When you open a menu, you see these tabs:

TAB	WHAT IT DOES
Items	Where you do 90% of the work. Every item with section headers, prices, dietary flags, status.
Preview	Live preview of the menu rendered the way it will appear in print. Click the expand icon for the full-screen lightbox.
Edit Log	Every change made to this menu — who, when, what changed. Pending edits get an amber badge.
Sponsors	Toggle which sponsors appear on <i>this specific menu</i> (subset of the event's sponsor library).
Approvals	Per-menu sign-off. Same idea as event-level Approvals, but scoped to this menu.

07 Editing items — the core workflow

Adding an item

1. On the **Items** tab, scroll to the section you want to add to (or create a new section)
2. Click "+ Add item to [Section]" at the bottom of the section
3. Fill in the row:
 - **Title** (required)
 - **Description**
 - **Dietary flags** (VT / VE / GF) — tick whichever apply
 - **Size + Price** — e.g. 12oz + \$8
 - **2 Sizes?** — tick this if you want a second size/price
 - **Size 2 + Price 2** — only used if "2 Sizes" is on
 - **Status** — Active, Not Added, or Draft
 - **Notes** — internal notes about this item

Editing an existing item

Click any cell to edit in place. Changes save automatically when you tab out or click elsewhere.

Why your edit shows up amber

Any edit you make on an Active item flips it to

Pending Approval

. The change is saved, but it won't appear in syncs to Figma until an admin approves it. This prevents accidental mid-edit changes from going live.

Reordering items

Grab the row by the  handle on the left and drag up/down. Items can't move between sections — change the section name on the item itself.

Reordering sections

Use the **↑ section / ↓ section** buttons in the section header.

Reset columns

If you've dragged columns around or resized them and want the default layout back, click **Reset columns** above the table.

08 Status values

Every item has a Status. This controls whether it shows up where.

STATUS	WHERE IT APPEARS
Active	Shows in Menu Hub, Figma sync, exports — the live menu
Pending Approval	Saved but not visible in syncs until approved. Highlighted amber.
Not Added	Saved but explicitly hidden. Use for items you want to keep around but not show this round.
Draft	Saved as work-in-progress. Hidden everywhere except the Items table.

Same vocabulary applies in the Master Google Sheet and CSV imports.

09 Sections

Sections are just text labels — type whatever you want (SIGNATURES , BEER , NON-ALCOHOLIC). Items group automatically by their Section field.

To rename a section, change the Section field on every item in it (or use the Master Sheet for bulk).

To create a new section, type its name in any item's Section field. The new section appears in the table immediately.

10 CSV import / export

The most common bulk workflow.

Exporting a menu

1. Open the menu → **Items** tab
2. Click **Export CSV** (top right)
3. Downloads a `.csv` you can open in Excel / Numbers / Google Sheets

Importing a menu

1. Open the menu → **Items** tab
2. Click **Import CSV**
3. Drop your CSV file — preview shows what will be added/updated
4. Confirm to apply

CSV column order

The columns are fixed and must be:

SECTION	TITLE	VT	VE	GF	DESCRIPTION	2 SIZES	SIZE	PRICE	SIZE 2	PRICE 2	STATUS	NOTES
---------	-------	----	----	----	-------------	------------	------	-------	-----------	------------	--------	-------

- **VT / VE / GF / 2 Sizes** = `TRUE` OR `FALSE`
- **Price columns** can be `12` , `$12` , `$12.00` — all get normalized
- **Status** = `Active` , `Pending Approval` , `Not Added` , OR `Draft`

Need the template?

Download it from inside Menu Hub: Items tab → Import CSV → "Download template". Comes with the right headers and a sample row.

The Master Google Sheet

There's a Master Sheet that mirrors the CSV format with one tab per menu, plus extra automation (auto-flag edits, approval workflow, version log). If you've been given access, use it for bulk edits across many menus at once.

Instructions for the Master Sheet are in the sheet itself (Help / README tab).

11 Approving edits

When someone edits an Active item, its Status flips to **Pending Approval**.

To approve:

1. Open the menu → **Items** tab
2. Pending items are highlighted amber. You'll also see an amber **Edits** chip in the page header
3. Click **Approve Menu** (top of page) to approve everything in one shot, *or*
4. Open the **Edit Log** tab to review each change individually, with old/new value diffs, and approve/reject from there
5. Approved items return to **Active** and the next Figma sync pushes them out

Internal users can approve their own and others' edits. External users can edit but not approve — only admin/internal can approve external edits.

12 The Preview tab

Shows the menu rendered the way it will look in print, using whatever style spec the brand/event/menu is set to.

- **Zoom in/out** with the +/- buttons in the lightbox
- **Reset zoom** with the percentage label
- **Esc** or click the X to close the lightbox
- The preview also gets pushed to Figma when someone syncs the menu via the **Menu Sync** plugin

If the preview looks off (cut off, weird spacing), an admin needs to adjust the menu's style overrides — flag it to them.

13 Sponsors

Sponsors are managed at three levels:

LEVEL	WHERE	WHAT
Series	Sidebar → Sponsors	The full library of sponsors that exist for the series. Admin manages this.
Event	Event → Sponsors tab	Which sponsors are active for this event (subset of the series library).
Menu	Menu → Sponsors tab	Which sponsors appear on this specific menu (subset of the event's active set).

Each menu can override / re-order which sponsors appear. By default, menus inherit the full active set from the event.

To add a sponsor not yet in the library: ask Sean — it has to be added to the series-level library first.

14 Sync status — what the chips mean

On the event's **Menus** tab, each menu card shows a chip:

CHIP	MEANING
Synced	The Figma version is up to date with the latest Menu Hub data.
Sync needed	Menu Hub has changes that haven't been pushed to Figma yet. Tell whoever runs the plugin to re-sync.
Not synced	This menu has never been pushed to Figma. Needs an initial sync.
3 edits	Red number badge — there are pending edits awaiting approval (separate from sync status).

The Figma sync itself is run by whoever has the **Menu Sync** plugin installed (covered in the Admin Walkthrough). You don't need to do it — but you can watch the chip to know when your edits have made it to print.

15 Favorites

Star 🌟 icon on any event or menu's header → it appears in your **Favorites** sidebar item. Per-user, so star whatever you work on most.

16 Mobile

Menu Hub works on phone/tablet. Cards stack, tabs scroll horizontally. The items table becomes a card list. Editing inline still works.

Reasonable for quick checks, status approvals, walking through a menu with a vendor. Not ideal for heavy bulk editing — use a laptop for that.

17 Help inside the app

Sidebar → **Help** has searchable docs that mirror this walkthrough, plus FAQs and shortcuts. The version inside the app is always the most current — if something here is out of date, that one wins.

18 Who to ask

ISSUE	WHO
Can't log in / forgot password	Sean
Need access to a brand	Sean
Preview looks broken	Sean (style spec issue)
Want to add a sponsor not in the library	Sean (series-level addition)
Found a bug	Sean — describe the menu, the tab, and what happened
Want to bulk-edit dozens of items	Use the Master Google Sheet, or ask Sean for access

Things to remember

- Your edits **save automatically** — no Save button to forget
 - Edits to Active items become **Pending Approval** until someone signs off
 - Status defaults to **Active** when you add a new item — if it should be hidden initially, set it to **Draft**
 - The **Preview** tab is the source of truth for how the printed menu will look, *not* the items table layout
 - Don't rename sections by editing one item — change the Section field on every item in that section (the Master Sheet makes this easy)
 - The **Sync chip** tells you whether your changes have hit Figma yet; it doesn't mean your edits aren't saved (they are, immediately)
-

Last updated June 2026. For the always-current version, see the Help page inside Menu Hub.
